

## Derwent Living Housing Trust

In partnership with Greenfingers Landscape Limited, Mulberry undertook a detailed tree survey of all of Derwent Living's properties that contained trees. This involved approximately 130 sites, which cover the Derby, Stoke and Nottingham areas but also contained sites as far south as Isleworth, London.

The project was completed within a three-month period and provided detailed information on Derwent Living's current tree stock identifying any immediate works. It also made recommendations on future management proposals to assist in identifying an ongoing budget for future maintenance and made recommendations for future surveys.

The report was presented in a tabular format for each individual site, which was supported with a plan identifying the location of each individual tree.
