

The Trafford Centre, Manchester

On behalf of The Trafford Centre, Mulberry undertook a detailed tree survey of all their tree stock. This included over 1,000 individual trees and a number of small wooded areas.

The project was completed within a three week period and provided detailed information on The Trafford Centre's current tree stock identifying any immediate work, it made recommendations on future management proposals to assist in identifying an ongoing budget for future maintenance and made recommendations for future surveys.

The report was presented in a tabular format, which was supported, by a number of plans identifying the location of each individual tree and woodland.
